PROJECT REPORT

In this project, I chose to work with platforms such as Google Forms, Google Sheets, email services, and LinkedIn. Google Forms is used for creating surveys and quizzes, which helped me design a Digital Literacy Awareness Quiz and understand how to collect structured data. Google Sheets is useful for organizing and analyzing responses efficiently, making it easier to interpret information. Email platforms are essential for formal communication, and practising email writing improved my ability to communicate professionally. LinkedIn is a professional networking platform that allows me to connect with industry professionals, showcase my skills, and explore internship opportunities.

Over the next four years, I plan to use these platforms regularly to support my academic and professional growth. I will use Google Forms and Sheets for projects and research work, email for formal communication with professors and recruiters, and LinkedIn to build my professional profile and network. These tools will help me stay organized, improve communication, and prepare for future career opportunities.
